Agent Load Path Review

Purpose: make the minimum deployable operating system visible before a consequential workflow crosses into production. This is an illustrative candidate artifact, not an Accenture method.

WORKFLOW UNDER REVIEW

Outcome	What business result changes, for whom, and how will it be observed?
Boundary	Where does the agentic task start and stop? Which exceptions leave the path?
Why agentic	What genuine reasoning is required that deterministic automation cannot handle better?

FIVE CONTRACTS

Contract	Ready when...	Evidence / owner
Work	Outcome, user, boundary and exception path are explicit.	_____
Context	Sources, provenance, freshness, permissions and forbidden inference are explicit.	_____
Authority	Tools, actions, approval thresholds and non-delegable judgment are explicit.	_____
Evidence	Task, groundedness, safety, adversarial, latency and cost tests exist.	_____
Run	Production owner, observability, fallback, incident and learning loop exist.	_____

RELEASE POSTURE

Posture	Use when	Next decision
Release with controls	All five contracts are load-bearing for the bounded task.	Monitor real-use evidence and adaptation.
Shadow	System can run safely without acting; evidence needs real workflow exposure.	Compare output with accountable human decisions.
Human-first assist	Retrieval/organization is useful but consequential judgment remains human.	Clarify whether authority should ever expand.
Hold	Context, authority, evidence or ownership cannot safely carry the task.	Redesign the weakest contract before more autonomy.

SCORECARD WITH REQUIRED CONTEXT

For each selected measure, record the current baseline, unit, observation window, source and target evidence. Do not use an unsupported maturity percentage.

Dimension	Baseline / unit / source	Production evidence
Business outcome	_____	_____
Task quality	_____	_____
Authority / review	_____	_____
Latency / availability	_____	_____
Cost per successful task	_____	_____
Adoption / trust	_____	_____

DECISION RECORD

Posture: _____ Owner: _____ Review date: _____

What must change before the next posture: _____
